

AUTO POWER ADAPTER

The Lind Automobile Power Adapter is designed to power your laptop computer and to charge its internal battery from an appropriate DC voltage power source (see adapter label for acceptable DC voltage ranges). The adapter supplies current and voltage levels as required by the laptop.

The adapter provides safe power to your laptop by protecting it from spikes and power surges which may occur in a DC voltage electrical system.

Use only with IT equipment. Protection Class III.

SPECIAL USE WARNING

Do not use this adapter with a lighter plug splitter or extender cable. These devices can cause the adapter cigarette lighter plug to become very hot. The plastic case of the splitter receptacle traps the heat in the plug and does not allow it to dissipate.

Contact Lind at (800) 659-5956 or via email at techsupport@lindelectronics.com to place an order or for help with any questions.

COMMON QUESTIONS ABOUT AUTO POWER ADAPTERS

What if the output LED on the adapter does not light when plugged in?

Some cars must have the engine running or have the ignition key to the ON position in order to have power occur at the lighter socket. On commercial flights, the airline in-seat power port may be turned off during parts of the flight. It is also possible that one of the safety shut down circuits in the adapter has tripped. If so, allow the automatic reset to restore the output power for the adapter. Also check to see if the fuse on the adapter has blown.

Is it normal for the adapter to get warm during use?

Yes. Restricted air flow around the adapter may also cause the adapter to overheat and shut down. This is a safety feature and does not harm the adapter or your computer. Do not place the adapter in a vehicle glove compartment or other restrictive area, or cover it with anything that prevents the heat from dissipating.

Does it matter whether the input cable or output cable gets plugged in first?

No, the order in which you plug in the cables to the adapter does not matter.

Can I plug the computer into the adapter when it is running?

Yes, you may plug the computer into the adapter when the computer is running.

Can I start or stop the vehicle engine with the adapter plugged in?

You can start or stop the vehicle engine with the adapter plugged in; however, do not jump start the vehicle with the adapter plugged in. Many jump start systems use high voltages that will normally shut down the adapter output but extreme voltage spikes may damage the adapter circuitry. Also, starting the vehicle may turn the adapter off. After a ten second delay, the adapter will turn back on.

Can this Lind adapter be used with a multi-output cigarette plug splitter?

No, do not use this Lind adapter with multi-output cigarette plug splitters. These devices can cause the cigarette lighter plug on the adapter to become very hot. The plastic cases of multi-output cigarette plug splitters can trap the heat and not allow it to dissipate. Call Lind for alternate ways of connecting more than one device to your DC power source.

Replacement and direct input connection cables as well as replacement fuses are available from Lind. Contact Lind via email at techsupport@lindelectronics.com or at (800) 897-8994 to order, or for help with any questions.
